# Business Case

Project Name: Automatisation du traitement des factures
Prepared by: Rayen Mabrouki

## Objective:

This project automates the end-to-end invoice management process using UiPath, combining sequential, flowchart, and state machine workflows. It aims to reduce manual data entry time, minimize errors, and improve efficiency in the accounting workflow.

## Expected Benefits:

- Reduction of manual effort by up to 70%
- Significant reduction in invoice entry errors
- Increased traceability and standardization of processes

## ROI Estimation:

The automation is expected to pay for itself within 6 months due to reduced manual workload and improved accuracy.
